AudioMuzoFans recommends TAGA Harmony PF-1000DC power filter with DC blocker (02-2024).

When considering: whether is it worth using a power noise filter in our system? The answer should be clear: it's worth it. The TAGA Harmony filter may not have caused huge changes in the sound of the system, but it's certainly improved the dynamics and added more "black background" as well as eliminated the slight hum.

And since, in addition to cleaning the network, it will allow us to protect our equipment for a much lower price than other similar devices, I will recommend its use with a clear conscience.
